

Figure 2

Components Shown

- 100 - power plant
- 201 - left impeller
- 201c - left impeller spokes
- 202 - right impeller
- 202c - right impeller spokes

Figure 3

Components Shown

- 100 - power plant
- 201- left impeller
- 202 - right impeller

Steps Shown

- 211 - application of counter clockwise torque to the left impeller 201
- 212 - application of clockwise torque to the right impeller 202
- 231 - impeller 201 imparts counter-clockwise reactive torque to power plant 100
- 232 - impeller 202 imparts clockwise reactive torque to power plant 100
- 240 - reactive torques 231 and 232 cancel at power plant 100

Figure 4

Initiating forced vortices by
imparting angular momentum
to cylindrical band of air
between impeller blades

Figure 5

Components Shown

- 301a - Left rotor blades 201a
- 302a - Right rotor blades 202a
- 301 - Left Forced Vortex
- 302 - Right Forced Vortex
- 301a - Left forced vortex surface
- 302a - Right forced vortex surface

Steps Shown

- 211 - imparting counter clockwise angular momentum to left forced vortex 301
- 212 - imparting clockwise angular momentum to right forced vortex 302

Figure 6

Figure 7

Figure 8

Figure 9

Steps shown are

- 311 and 312 - accelerating surrounding air downward by forced vortices 301 and 302
- 411 and 412 - severing moving air from the surfaces of forced vortices 401 and 402
- 511 and 512 - guiding moving air away from the undersides of vortex load couplers 601 and 602 by air guides 501 and 502.

Figure 10

The straight arrows represent centrifugal force pulling outward on the air in a forced vortex. The arcing arrow represents the motion of a forced vortex. Unless the vortex ends terminate on surfaces they draw air in through the ends and dissipate. The diagram shows a vortex (grey area) that is widening and drawing new air into its center(white area).

Figure 11

The vortex seals 701 and 702 are surfaces for the vortices 301 and 302 to terminate on. They prevent the entry of outside air into the cores of 301 and 302. The hidden impellers 201 and 202 that generate the vortices are represented with dashed lines.

Figure 12

rotor blades - 202b

Figure 13

air guide - 502

air knife - 402

Figure 14

Steps Shown

- 712 - pumping air out the core of right forced vortex 302 by right air pump 802
- 812 - sealing the ends of forced vortex 302 with right front and rear seals, 702 and 704

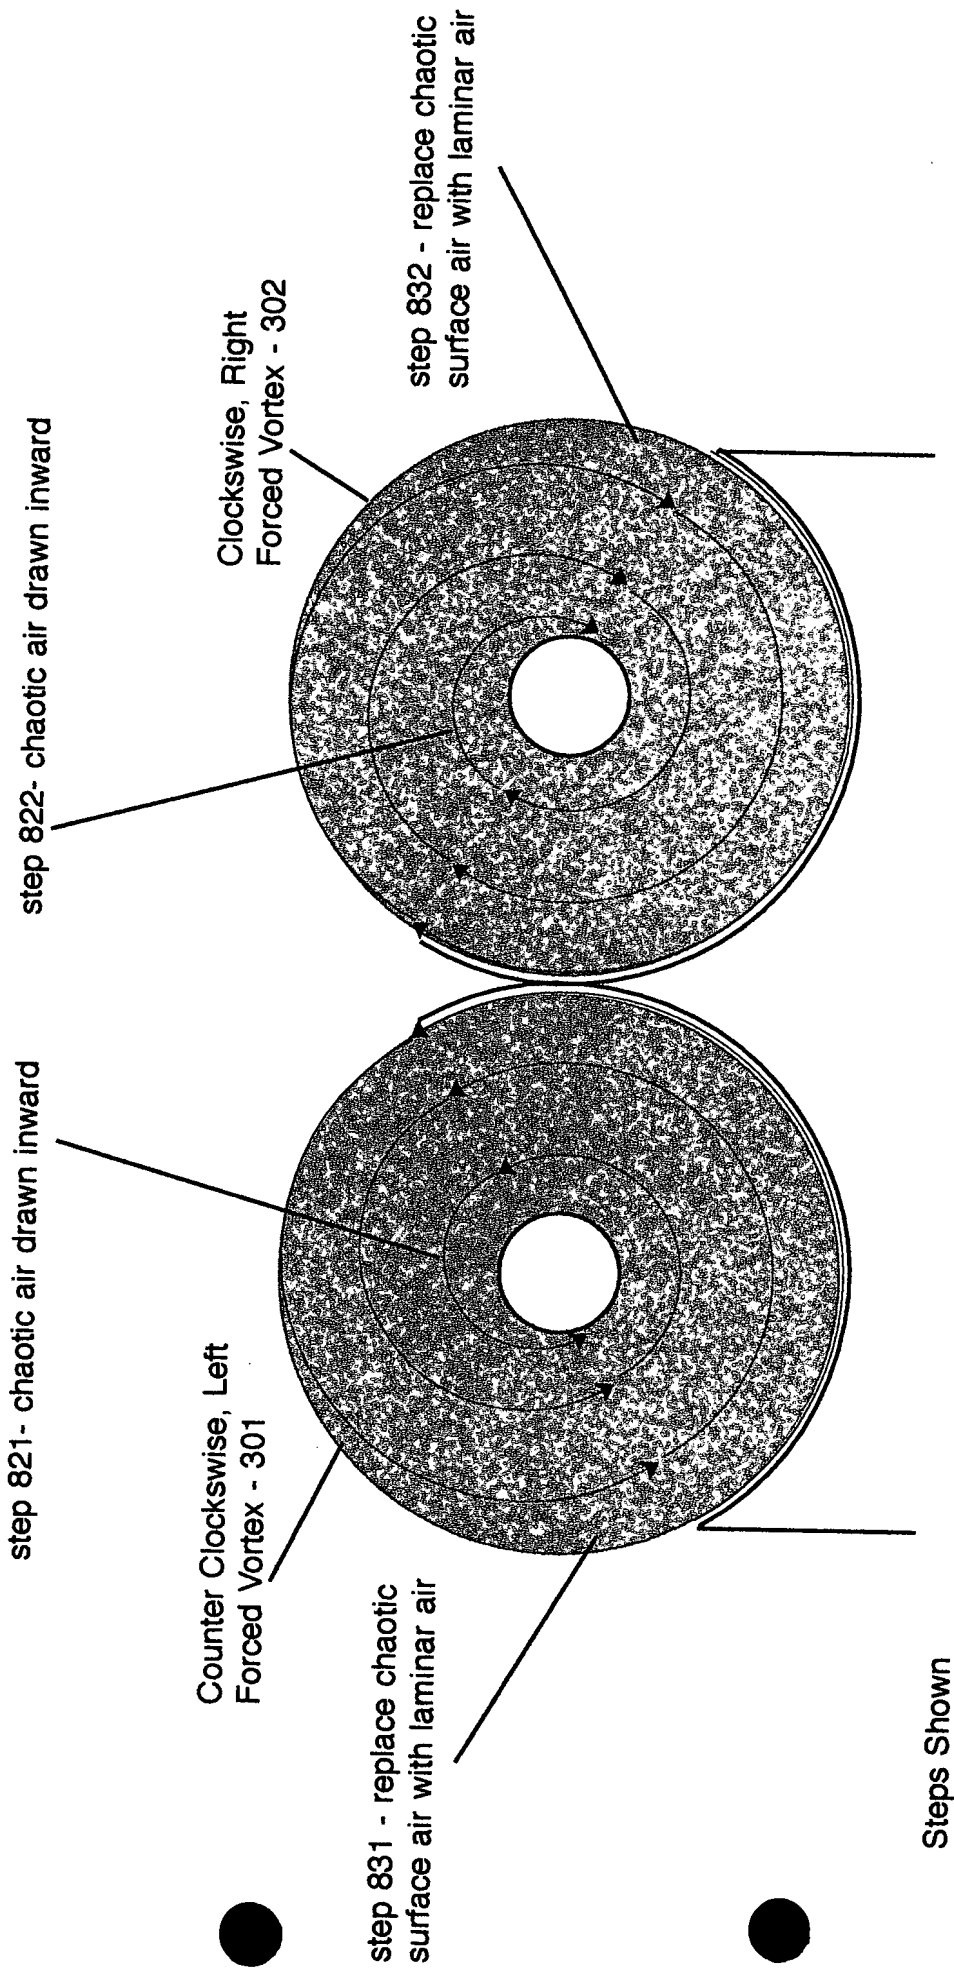

Figure 15

Steps Shown

- 611, 612 - rotate fresh surfaces of forced vortices 301 and 302 into contact with the lifting surfaces, 601 and 602
- 631, 632 - make surfaces of forced vortices, 301 and 302 chaotic or turbulent by bringing them into contact with roughened of lifting surfaces, 601 and 602

Figure 16

821 and 822 - draw chaotic or turbulent air created in steps 631 and 632 inward toward the inlet of the air evacuators 701 and 702. Those inlets are represented by the white circles in the center of the gray representations of the forced vortices 301 and 302

831 and 832 - replace chaotic air withdrawn from the surfaces of forced vortices with laminar air from just beyond the volume swept out by the impellers

09024749 .021798

Figure 17

Steps Shown

- 641, 642 - protect upward driving surfaces of forced vortices 301 and 302 to prevent substantial upward acceleration of air surrounding the forced vortices and to enhance the net downward acceleration of that air
 - the heavy dotted arrow represents steps 641 and 642
 - the heavy solid arrow represents enhanced surface area available to do steps 311 and 312 by tilting the lifting surfaces 601 and 602

Figure 22

Figure 23

Figure 24

Note: The air knives 401 and 402 are the intersections of the intections of the lifting surfaces, 601 and 602, and the air guides, 501 and 502.

Distal edges of lifting surfaces are 601a and 602a
Proximal edges of lifting surfaces are 601b and 602b.
